

AUTOMATIC AIRSPRAY/AIRLESS COATING SYSTEM FOR THE PROTECTION OF EARS AND PAILS

This equipment has been designed and manufactured for the application of protection lacquer inside the pails where the ears have been welded, in order to avoid contamination of the filled product caused by the welded spots. This system is fully automatic and consists of a wet lacquer application unit with 2 spraying guns, one pneumatic pump to feed the lacquer, one tank for lacquer and solvent. The automatic operation is controlled by electronic timers and manometer adjustments, located inside the electric cabinet. The supply includes a suction hood to be installed close to the spraying operation and which must be connected to a vacuum and exhaustion system for overspray fumes (Optional)
